Haley & Aldrich’s environmental and engineering consultants build relationships that last because we deliver the value our clients seek.

What matters to our clients matters to us.

Our environmental and engineering consultants earn our clients' trust through a relentless drive to understand and act on their distinct needs. Some clients may want to learn how to tackle their challenges themselves. Others may need help managing diverse stakeholders' needs. Or, they may want to understand the right time to act on an emerging challenge.

Whatever the need, we are problem solvers intent on doing what benefits our clients most through addressing the complex and sometimes opposing environmental, geotechnical, organizational, and community challenges they face.

From large public conglomerates to small private companies, universities and government agencies, our clients rely on us to ask the right questions and truly listen. Using those simple steps as a foundation, our environmental engineering firm has been developing expertise across multiple markets since our founding in 1957.

Through seeking to deeply understand what matters to our clients and their organization, they know we will respond with unexpected approaches that often surpass expectations. And, they know our decades-long understanding of their business gets them the results they seek faster.

We invest in training our team members to be active listeners and creative thinkers for one purpose: to help clients get results more efficiently, and results that endure. We anticipate and manage roadblocks that could impact success not just today, but down the line. We do this not only for geotechnical and other complex challenges, but also for the community, regulatory, or internal stakeholder impediments that could thwart progress. And we know how to work with stakeholders to get them on the side of our clients.

That's the H&A way.
