Boise

Bringing value to clients in Idaho and beyond.

Clients rely on our geotechnical engineering and environmental consulting.

From Idaho’s state capital, Haley & Aldrich’s Boise consultants partner with colleagues across the country to remediate contaminated sites, tackle geotechnical engineering challenges, and provide other services that include:

- Brownfields
- Construction
- Contaminated site management
- Disaster and climate resilience services
- EHS compliance
- Sustainability
- Geotechnical engineering
- Lean consulting
- Water resources

Construction, development, and environmental projects in Boise and the broader Pacific Northwest come with unique geotechnical and regulatory challenges. For example, Boise's soil conditions pose risks of differential settlement and foundation instability, while fluctuations in groundwater levels complicate excavation and drainage planning. At Haley & Aldrich, we recognize that successful projects in Boise demand tailored geotechnical solutions and environmental services that specifically address your project. Our engineers bring decades of expertise in foundation design, soil stabilization, slope stability, and structural resilience to mitigate these challenges.

In addition to other complex projects in the region, we managed a drilling project to guide a southeastern Idaho client in the safe development of phosphate fields and mines.
