

## Oakland

Bringing value to clients in Oakland, California, and beyond.

Offering engineering and environmental consulting from Oakland in collaboration with teams across the country.

Located in downtown Oakland, our local team of experts partner with our consultants around the country to guide clients on:

- [Brownfields](#)
- [Construction](#)
- [Contaminated site management](#)
- [Disaster and climate resilience services](#)
- [EHS compliance](#)
- [Sustainability](#)
- [Geotechnical engineering](#)
- [Lean consulting](#)
- [Water resources](#)

Environmental issues and regulatory requirements can present significant challenges for construction, development, and environmental projects in the Oakland area. As if that weren't enough, Oakland is near the Hayward Fault and the San Andreas Fault, both major sources of seismic activity in California. Haley & Aldrich draws on decades of expertise to deliver specialized geotechnical engineering services and environmental solutions throughout this geologically complex area.

Our geotechnical engineers and scientists in Oakland are skilled in environmental assessments, foundation design, structural engineering, and ground improvement techniques that enhance resilience in this dynamic Bay Area region and beyond. By integrating environmental consulting services with advanced geotechnical expertise, Haley & Aldrich delivers comprehensive, innovative solutions that promote sustainable and regulation-compliant development.

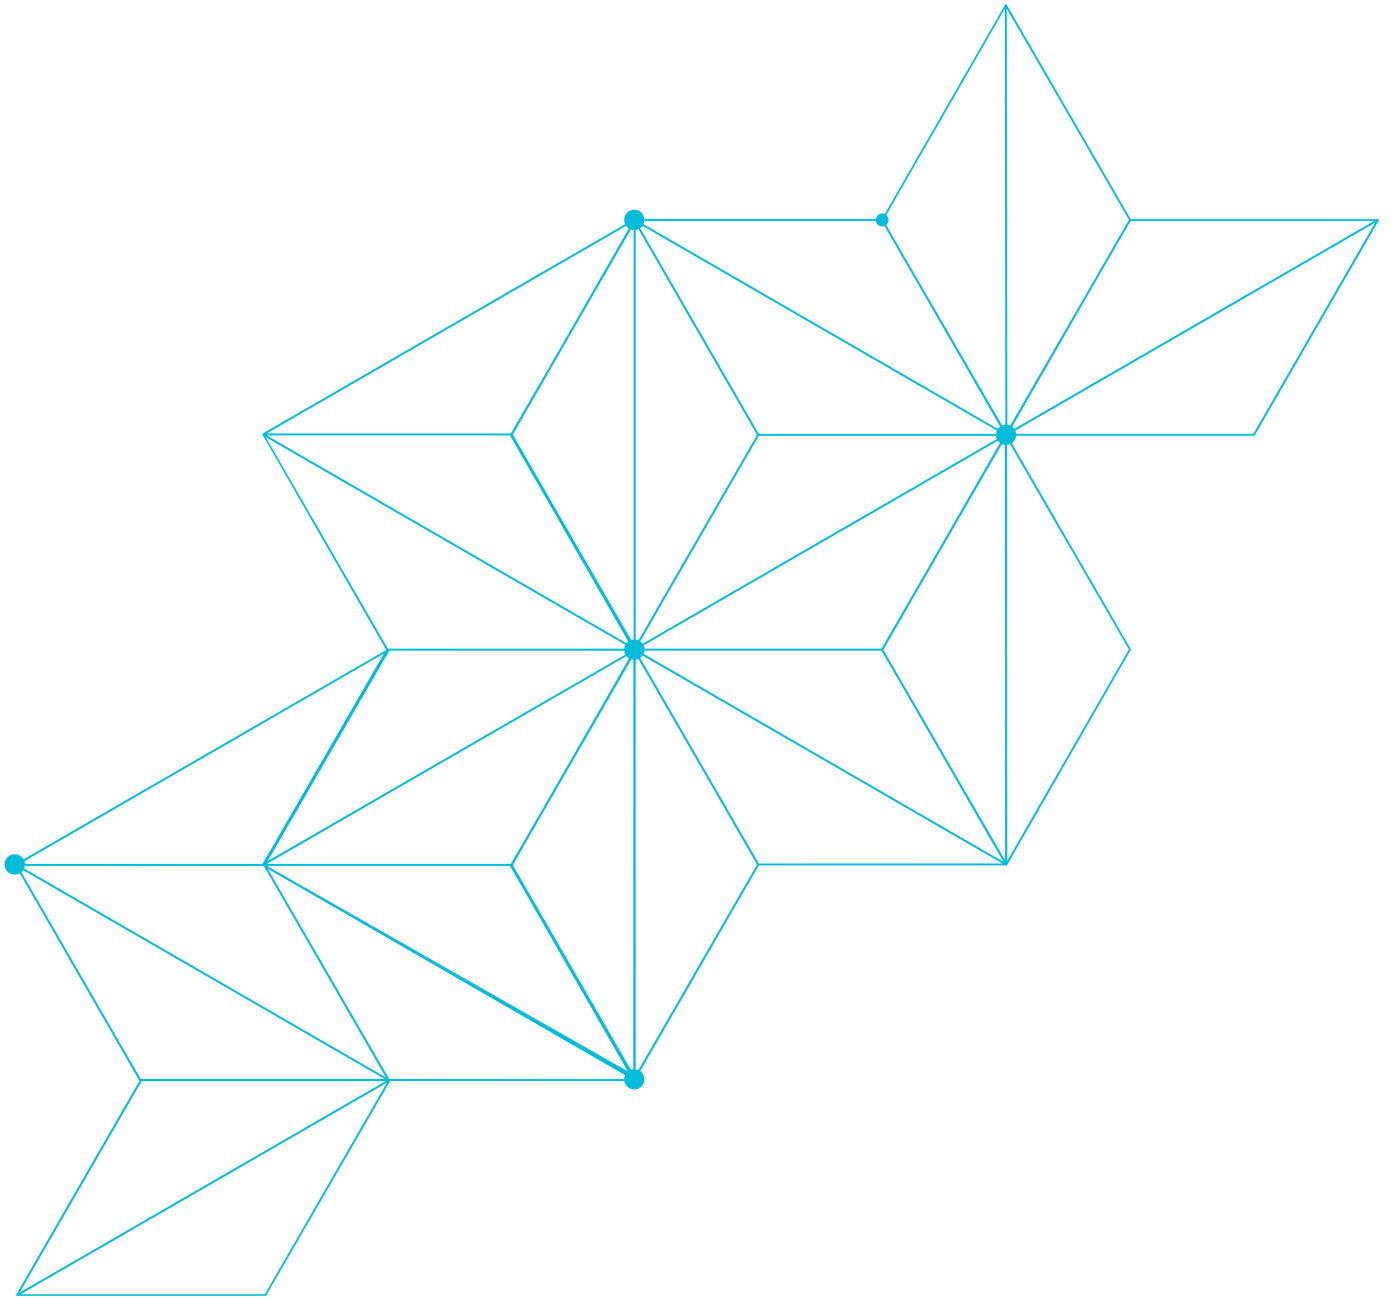

In one notable project, our environmental compliance team [helped the Port of Oakland meet tenant needs](#) and maintain environmental stewardship for the community, while preserving its reputation as an environmental ally.
