- EHS compliance
- Sustainability
- Geotechnical engineering
- Lean consulting
- Water resources

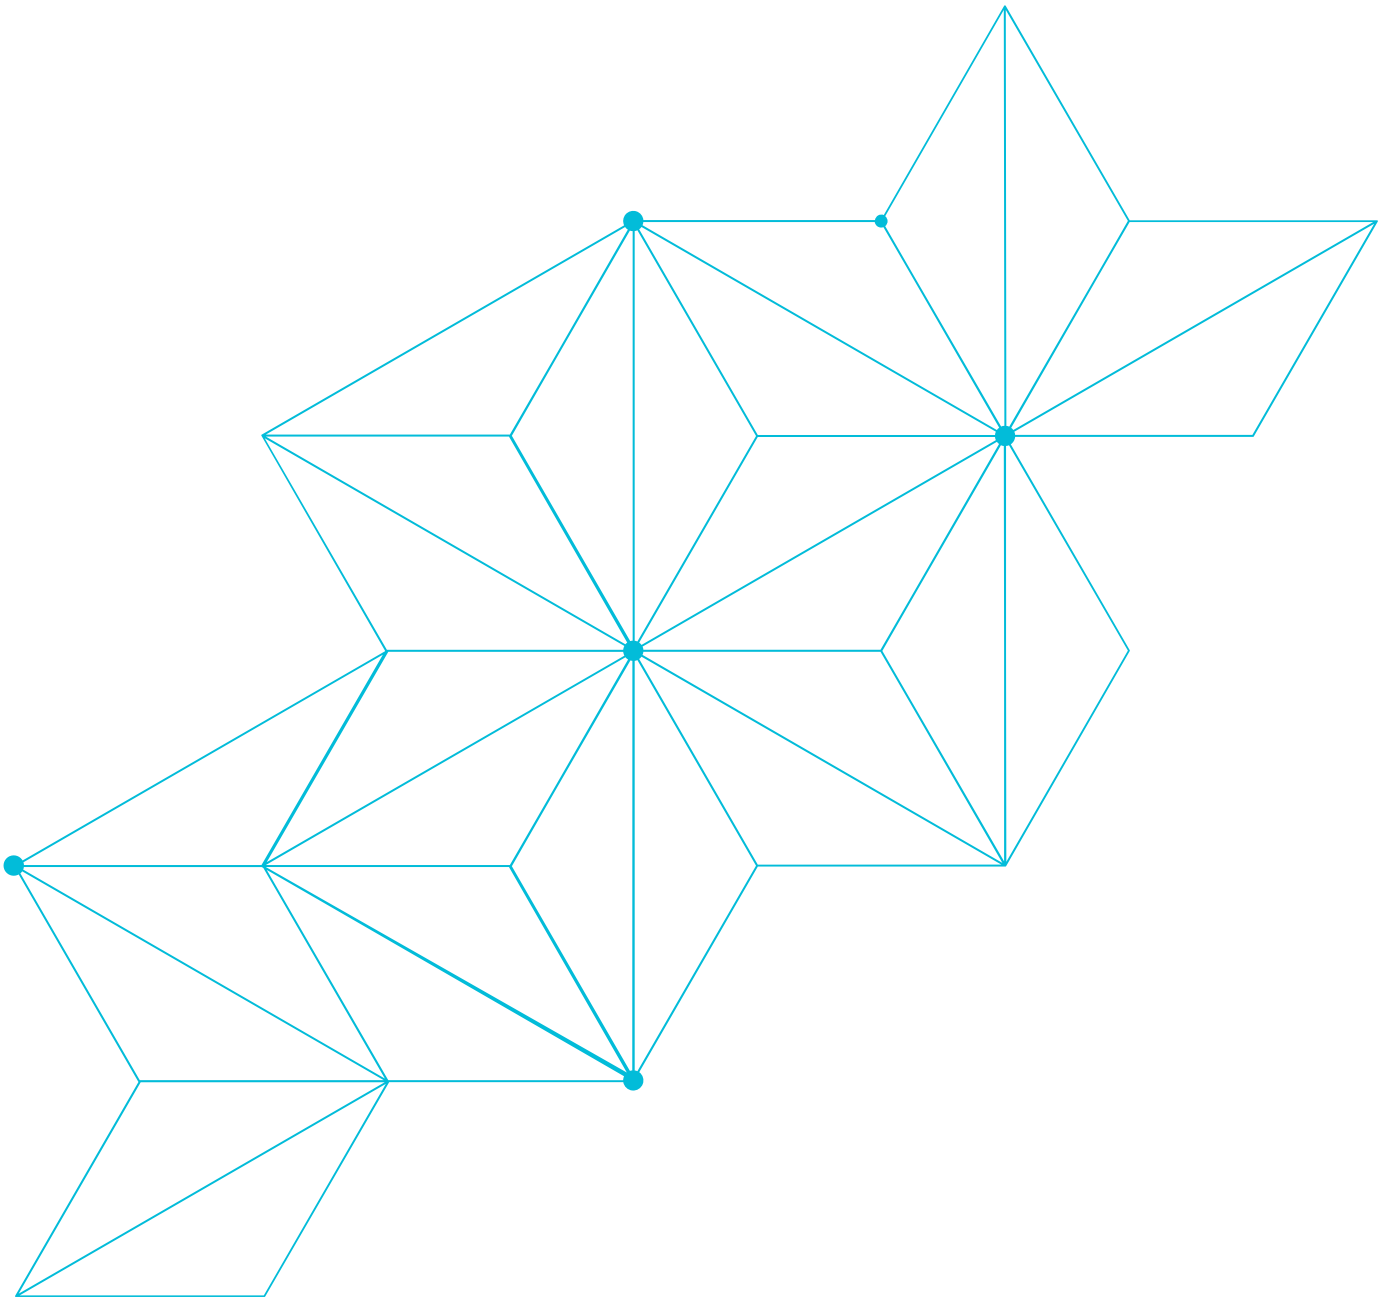

Construction, development, and environmental projects in the San Jose area often face significant obstacles. Environmental concerns and regulatory requirements come with the territory — and as part of the San Francisco Bay Area, San Jose also is situated within a major fault zone, making it highly susceptible to seismic activity. Certain areas of San Jose also face geologic hazards such as slope instability, which can impact proposed developments.

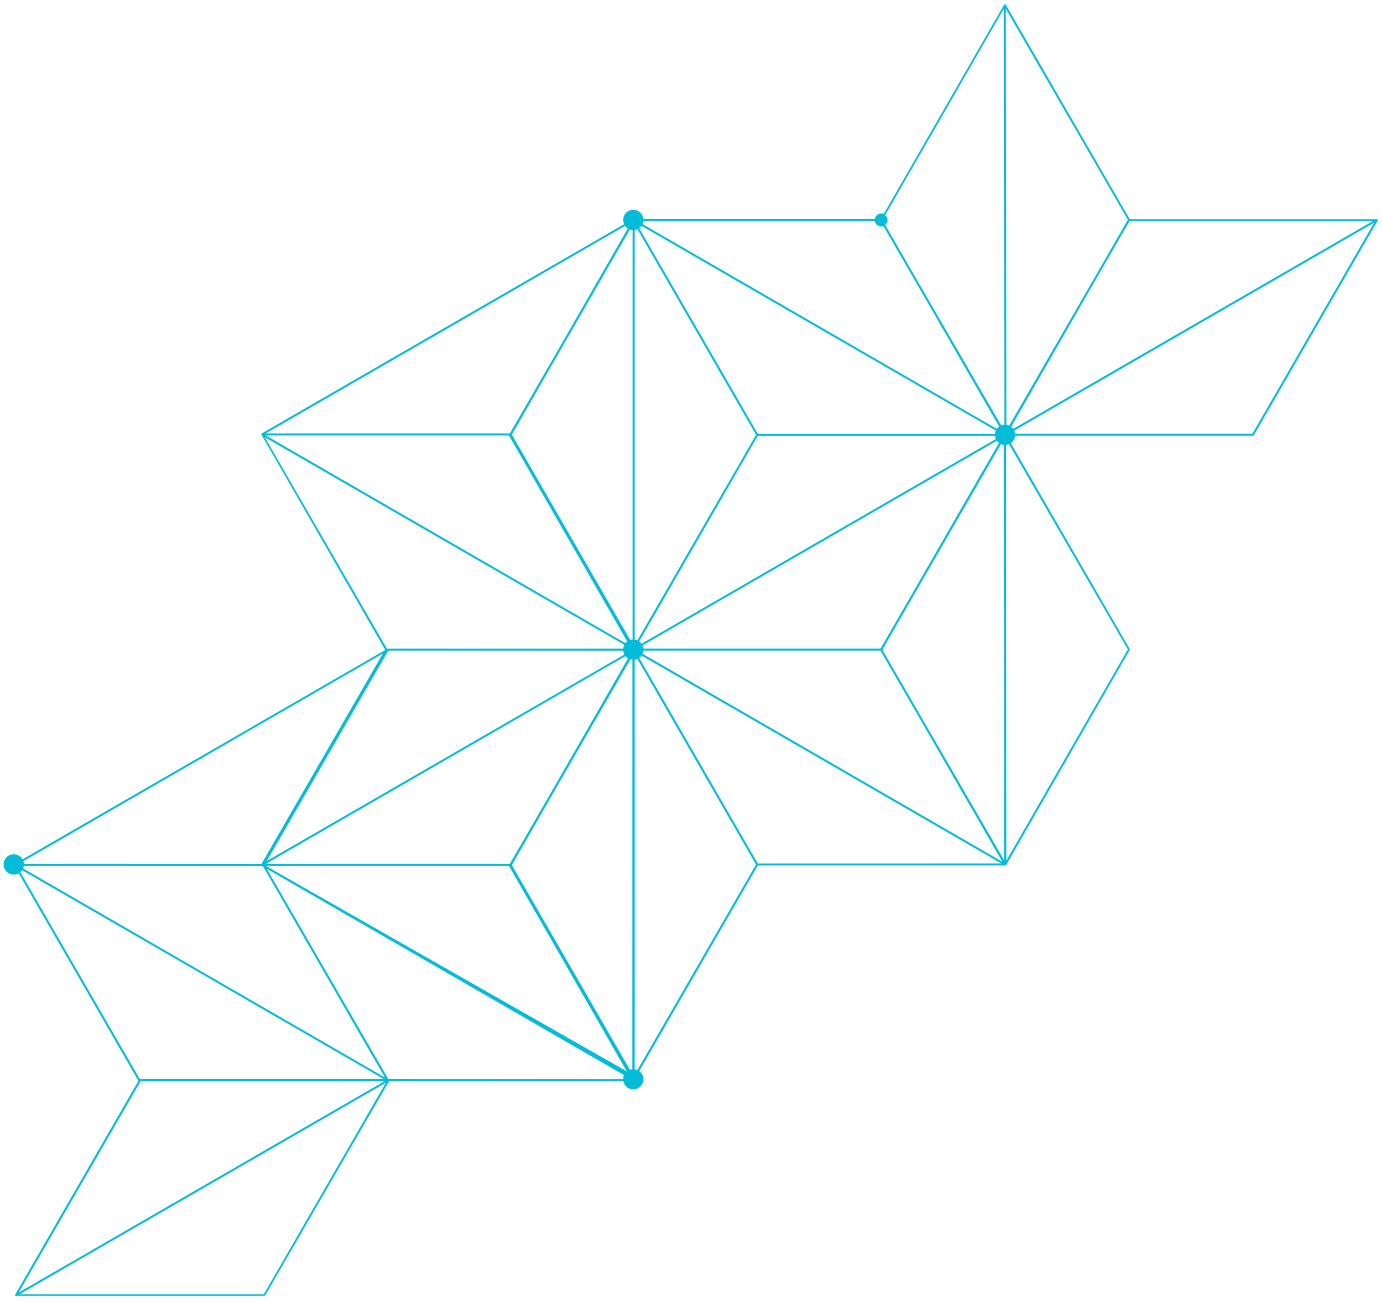

Fortunately, Haley & Aldrich leverages decades of expertise to provide specialized geotechnical engineering services and environmental consulting in San Jose and throughout Northern California and the United States, all tailored to your project. By combining environmental consulting with advanced geotechnical expertise, Haley & Aldrich's experts deliver innovative solutions that support sustainable development and long-term resilience in San Jose and beyond.

Our Northern California team has deep experience with the state's complex geology and use of resources and strong relationships with relevant local and national agencies.
