

Aerospace

We infuse the best science with advocacy to achieve the simplest solutions for your complex aerospace challenges.

Managing your aerospace sites' risks, liabilities, and costs in a dynamic regulatory environment is complex. You know it requires a symbiotic relationship with regulators and other stakeholders. But being compliant isn't enough — you want to make sure the health and well-being of employees and communities are protected.

Haley & Aldrich's aerospace consulting team knows that successful projects blend science, advocacy, and industry experience to achieve favorable outcomes. We take a holistic, client-centric approach to aerospace projects — whether we're applying innovative technologies to treat recalcitrant and emerging compounds, or working with regulators to reduce downstream review cycles.

Our team of aerospace consultants includes experienced scientists, engineers, construction, and remediation experts who work alongside your organization's internal and external stakeholders, finding the most efficient path to manage your risk while reducing your liabilities and costs. We look at your specific situation with fresh eyes, identifying where your money should be spent — and where it shouldn't.

Haley & Aldrich's aerospace consulting team not only applies proven science, but also develops innovative solutions based on your individual challenges, whether they're related to remediation, aerospace infrastructure, risk assessment or something else entirely. Often, our greatest value to clients is our ability to help them see things from a new perspective — even if that means a different one than they originally expected.

Market Leader, Industrial and Manufacturing

A new approach to aerospace consulting

At Haley & Aldrich, we don't believe in a one-size-fits-all approach. We know that it takes more than science to solve a problem. It also takes agreement among your stakeholders. That's why our teams take a key role to advocate on your behalf and promote collaboration with regulators, and other outside stakeholders — and sometimes internally, too.

Understanding and considering these external and internal stakeholders' differing views and goals, we facilitate processes to reach mutual targets, milestones, and approaches. Some of our aerospace consulting services include:

- [Decommissioning and demolition](#)
- [EHS strategy and management](#)
- [Emerging contaminants](#)
- [Environmental risk assessment](#)
- [Remediation](#)
- [Remediation construction](#)
- [Site characterization](#)
- [Stormwater](#)
- [Sustainability and ESG](#)
- [Vapor intrusion](#)

With an eye toward environmental compliance, positive community impact, and your business, the team at Haley & Aldrich applies the best science married with advocacy, ensuring the most favorable outcomes in the shortest time.
