

Manufacturing

We bring teams together and push the limits of what's possible to deliver better outcomes for you.

Manufacturers operate in a complex, constantly changing landscape. With evolving regulatory standards and environmental challenges that include property cleanup, sustainability, and resiliency concerns, it can be difficult to address and mitigate risks while still providing shareholder value, reducing costs, and delivering top-quality services to your customers.

Haley & Aldrich's manufacturing operations consulting services focus on addressing the business, environmental, social, and community challenges you face. We look to deeply understand how your entire organization operates across departments, geographies, and functions – not just at the individual facility level. This allows us to develop innovative solutions that are specific to your manufacturing process, as well as your organizational challenges, needs, risk tolerance, and culture.

Our manufacturing consulting team includes experienced scientists, engineers, construction, and remediation experts who work alongside you to build trusted, long-term relationships. We combine our technical excellence with business acumen and the expertise needed to bring teams together, so we can help you broaden the environmental aspects of your manufacturing strategy and achieve your goals. We understand that to maintain a positive company image, you need to develop a shared vision with internal teams, regulators, and the community. Our manufacturing engineering consultants work closely with you and your partners to develop a strategic end vision for your project.

Our collaborative approach to manufacturing consulting services results in better problem solving, better industry insight, and better solutions for you — including reduced risk, accelerated site closure, improved sustainability, and enhanced stakeholder collaboration.

- Sediment dredging and capping
- Turnkey remediation design-build
- Vapor intrusion evaluation, mitigation design, and systems installation

MM

Delivering innovative strategies that push the limits of what's possible

Haley & Aldrich's manufacturing consultants continually challenge themselves to go beyond standard work. Our novel thinking often leads to transformational results for our clients in the manufacturing industry – whether we're pioneering novel cleanup technologies or uniting partners around common solutions using whole-systems thinking and facilitation tools.

When you work with Haley & Aldrich, you'll find that our experienced manufacturing operations consultants continually seek opportunities to push the limits of what's possible while implementing best practices. And we do so with a purpose: to create the highest value while lowering your overall costs.

Our manufacturing consulting services include:
