EPA issues draft risk evaluation for trichloroethylene: Implications for possible changes to risk management

Trichloroethylene (TCE) periodically undergoes risk evaluation under the Toxic Substances Control Act (TSCA). In February 2020, U.S. Environmental Protection Agency **(EPA) released a draft risk evaluation for TCE, which could have implications on how organizations manage TCE exposure and risk in the future** Specifically, there may be less need for emergency regulatory responses and a return to a more pragmatic approach to risk management decision-making for TCE.

Read our full regulatory update to learn more about the draft risk evaluation, including:

- Current risk management approach and challenges for TCE
- The relevancy of developmental effects in light of new evidence
- Implications for future risk management approaches
