Excavation support in dense urban environments

In this American Society of Civil Engineers webinar, join Francisco Diego, P.E., Director of Product Management, Geotechnical at Bentley Systems, and Brice Exley, P.E., Senior Associate at Haley & Aldrich, for a lively discussion about real-world examples of urban excavations using innovation and fast, reliable analysis. Francisco and Brice will specifically talk about the strategies used to safely excavate under [Rainier Tower in Seattle](#). Other webinar topics include:

- Capture model sensitivity to input parameters and design
- Real-time modeling project stakeholder collaboration
- Discussions about where 3D analysis is making a difference
- Consideration of advancements in [geotechnical analysis for seismic regions](#)
