Resiliency corner by Haley & Aldrich — points of strength: resilience hub in Chiloquin

In a recent <u>article</u> for *The Western Planner*, Lucy Bishop, <u>Daniele Spirandelli</u>, and <u>Sarah Sieloff</u> discuss one small town's path toward climate resilience. This article kicks off a regular series, "Resiliency Corner," which will periodically feature the trio's insights.—

Chiloquin, Oregon, a rural town of 790 residents, is poised to build a resilience hub — a facility that provides support for both disaster recovery and daily life. Lucy, Daniele, and Sarah trace the town's journey to this milestone in the article titled "Points of Strength: Resilience Hub in Chiloquin." It's "a story that can inform small, rural communities striving to improve their own resilience in the face of economic and climate uncertainty," they write.-

Like many communities, Chiloquin faces increasing threats from climate instability, including devastating wildfires and economic impacts. Chiloquin began increasing its resilience by redeveloping contaminated and decaying downtown sites, securing over \$1 million in federal and state grants for brownfield cleanup. Wildfires in 2020 and 2024 exposed the city's vulnerabilities and disorganized emergency responses, showing the need for a centralized resilience hub. Chiloquin successfully applied for an Environmental Protection Agency Community Change Grant to support the creation of a facility to serve vulnerable populations and link existing community assets.-

Lucy, Daniele, and Sarah note that, according to research, rural communities such as Chiloquin rely heavily on social capital — trusted relationships and shared local knowledge — to prepare for and respond to disasters. The town's resilience hub represents a shift toward asset-based, community-driven disaster preparedness, building on that social capital.—
