

Environmental and waste facility construction

We address the full lifecycle of your project so you can most efficiently achieve your goals.

The pressure is on to quickly meet regulatory requirements — and as cost efficiently as possible — as soon as you discover an environmental liability. But that's often easier said than done when it comes to constructing new landfills, capping or closing old landfills, or addressing liabilities from years past. And for large remedial waste facilities, regulatory pressures and challenges presented by emerging contaminants like 1,4-dioxane and per-and polyfluoroalkyl substances (PFAS) can add even more costs and complications to operations and maintenance (O&M).

The team at Haley & Aldrich understands that you need a trusted partner who can simplify the process and quickly find efficient solutions. That's why we offer services to address the full lifecycle of your project — from design through to regulatory compliance, engineering, permitting, construction, O&M, and closeout. Because of this, our construction and engineering experts can streamline our efforts — leading to less cost and complication for you.

Our clients often tell us that their projects are simpler and encounter fewer snags because we offer in-house engineering, and a single senior staff member as a go-to resource. This approach not only saves you money in the long

run, but ensures the most efficient path to achieving your goals.

Forrest Paul

President, Haley & Aldrich Construction Services

Jeremy DeGrande

Vice President, Construction Services

Service highlights

- Landfill construction, maintenance, and closure
- Mine site disturbance, facility, mitigation, and reclamation construction
- Operations and maintenance
- Soil, synthetic, and pavement capping systems
- Surface and stormwater diversion systems

We easily adapt to our clients' environmental and waste facility construction needs.

The team at Haley & Aldrich acts with your best interests in mind — and we treat your resources as our own. We work side-by-side with you to find the best remediation technology for your needs and based on your budget, no matter the circumstances.

As a mid-sized, full-service consulting firm, we are also nimble and easily adapt. This allows us to act quickly not only when your needs and challenges change, but when regulatory changes emerge.

We provide environmental and waste facility construction services to the following markets:

- Aerospace
- Education, healthcare, and cultural institutions
- Energy
- Environmental trusts
- Government infrastructure
- Industrial and manufacturing
- Mining
- Real estate developers

At Haley & Aldrich, our ability to address the full lifecycle of your project combined with our adaptive, nimble approach allows us to find the most efficient path forward to achieve your project goals.
