

Remediation construction

We rethink the typical to create cost and time efficiencies for you.

Limited available properties and land for new construction have made construction remediation more common. Despite that, the process can be arduous due to pressing timelines, tight budget constraints, and difficult technical challenges. Add rigid compliance requirements and it's easy to see how site closure or no further action can feel unachievable.

Haley & Aldrich's remediation construction services team knows that you need a partner who not only understands these issues, but can work with you to find innovative solutions to efficiently address them. Our experienced team includes experts from all walks of the industry, allowing us to rethink the typical approach to address your challenges — whether you're dealing with structural deficiencies, environmental remediation construction issues after a brownfield cleanup, or something else entirely.

Our collaborative design-build approach, for example, allows us to create cost and time efficiencies. You will experience true collaboration throughout the design and construction process with a single, unified team working toward the same goal. We streamline processes because we combine our engineering and construction expertise — ultimately expediting remediation construction projects and leading to cost savings for you.

Program Manager, Environmental Remediation

Service highlights

- Heavy civil construction
- In situ solidification and stabilization
- Installation of treatment systems
- Landfill caps including leachate and gas collection systems
- Remediation construction
- Renewable energy construction
- Stormwater diversion systems

Taking an innovative approach to construction remediation

Our construction remediation team's creative thinking also extends into the regulatory realm. We combine that thinking with our deep regulatory knowledge to identify previously unconsidered paths, including when projects must comply with complex environmental remediation construction regulations from multiple governing bodies. For example, we often find new ways to dispose of generated wastes, or we take advantage of recycling opportunities to avoid generation of hazardous wastes altogether.

At Haley & Aldrich, we treat every project with personal, invested ownership. Your problems become our problems — and the solutions we develop become our shared victories.

We provide remediation construction services to the following markets:

- [Aerospace](#)
- [Education, healthcare, and cultural institutions](#)
- [Energy](#)
- [Environmental trusts](#)
- [Government infrastructure](#)
- [Industrial and manufacturing](#)
- [Mining](#)
- [Real estate developers](#)

At Haley & Aldrich, we work side-by-side with your team to find new ways to address your challenges, so you can reach your goals as efficiently and cost effectively as possible.
