

Site remediation construction

We rethink the typical to create cost and time efficiencies for you.

Limited land availability has made remediation construction essential to businesses and developers, whether they're managing legacy energy assets, revitalizing industrial or manufacturing sites, or redeveloping brownfields. But renewing the value of a contaminated property is rarely straightforward — tight timelines, budget constraints, technical complexities, and strict regulatory requirements can make site closure or redevelopment seem out of reach.

At Haley & Aldrich, we do more than deliver remediation construction — we also unite multidisciplinary teams of construction and environmental professionals to deliver a true design-build approach to create cost and time efficiencies while supporting your core business objectives. Our teams bring specialized expertise from serving sectors and their unique construction challenges that include energy, industrial, manufacturing, and real estate. Working seamlessly across disciplines, we provide innovative, field-tested solutions and collaborative project management tailored to each site's needs. From navigating evolving regulations and reducing risk and liability to accelerating project closure and enabling new opportunities, we empower you to move your project forward — safely, efficiently, and with results you can build on.

Partnering with Haley & Aldrich offers seamless collaboration among construction, engineering, and environmental experts, ensuring quality and efficiency. Our multidisciplinary teams consistently deliver tough remediation solutions on schedule and within budget, in part because of the deep agency relationships we have developed that allow us to efficiently navigate regulatory requirements and maintain compliance. We also incorporate a relentless focus on safety into every project to protect your people, community, and environment. In short, our approach transforms environmental liabilities — whether legacy assets or brownfields — into opportunities for growth.

Service highlights

- Backfilling and grading
- Barrier systems
- Dewatering systems
- Shallow and supported excavation
- Site restoration
- Underground utilities
- Waste transportation and disposal

Taking an innovative approach to construction remediation

We combine creative thinking with deep regulatory knowledge to identify previously unconsidered paths, including when projects must comply with complex environmental remediation construction regulations from multiple governing bodies. For example, we often find alternate ways to manage waste materials, or we take advantage of recycling opportunities to avoid waste disposal needs altogether.

This is just one way that Haley & Aldrich's remediation construction teams own every project. Your problems become our problems — and the solutions we develop become our shared victories.

We provide remediation construction services to the following markets:

- Aerospace
- Education, healthcare, and cultural institutions
- Energy
- Environmental trusts
- Government infrastructure
- Industrial and manufacturing
- Mining
- Real estate developers

At Haley & Aldrich, we work side by side with your team to find new ways to address your challenges so you can reach your goals as efficiently and cost effectively as possible.
