

Air quality

We serve as an extension of your team so you can focus on your big picture goals.

Air quality issues can potentially derail your project – whether you're undergoing a production expansion, planning the construction of a new capital project, developing a new product line, or something else entirely. Your goal is to focus your resources and deliver the most value to your organization, and you can't afford business delays due to air quality complications. Air quality issues can be complex, time-consuming to resolve, and can involve many stakeholders including regulators and at times the community. Your in-house environmental, health and safety (EHS) team may not have the bandwidth or air quality expertise to navigate the many complexities. This is when an expert provider of air quality compliance services becomes a valuable partner.

Haley & Aldrich's air quality consulting team – which includes chemical engineers, regulatory specialists, and modelers – takes a broad and deep view when working with you to address your air quality challenges. Our ability to see the full picture and how all the pieces work together allows you to focus on what really matters – without sacrificing your strong brand reputation or good stead with the community and regulators.

Our air quality consultants not only take the time to intimately understand the nuances of your challenges, goals,

systems, stakeholders, and regulatory requirements, like the EPA's Clean Air Act, but have the deep technical know-how to find the right solution for you. Because of this, often we're able to find unexpected solutions for our clients that add even greater value than they could have imagined.

Service highlights

- Air permitting and compliance support
- Dispersion modeling
- Compliance assessments
- Air toxics analysis
- Control equipment design support
- Environmental reporting
- GHGs/carbon footprint tracking
- Litigation support
- Odor mitigation strategies
- Regulatory agency strategy and negotiations

Taking accountability for your air quality challenges – and the solutions

Our air quality-specialists understand that your operations not only need to be compliant, but that your air quality strategy needs to align with your overall environmental program and accommodate future operations. Our clients often tell us that we're able to accomplish that for them because we become a part of their team – we get to deeply understand their goals and take personal ownership of their challenges, including achieving air quality compliance.

One recent example: A consumer products client wanted to get ahead of potential air emissions challenges at 50 facilities in 20 states. Our air quality compliance services experts dug deep to understand their operations, and leveraged that knowledge, sound science, our regulatory knowledge, and hard data to proactively develop and advocate our recommended approach with the regulators. Ultimately, we demonstrated air permitting compliance to regulators across the U.S., [streamlined air permitting for over 50 facilities](#), and minimized ongoing costs by empowering our client to manage future permitting.

We offer air quality consulting services to the following markets:

- [Aerospace](#)
- [Education, healthcare, and cultural institutions](#)
- [Energy](#)

- [Industrial and manufacturing](#)
- [Mining](#)
- [Real estate developers](#)

When you work with Haley & Aldrich, you gain new teammates committed to and accountable for reaching your goals. In the end, we know that when you are successful, we are successful.
